

How to create a Hyperlink using Dreamweaver:

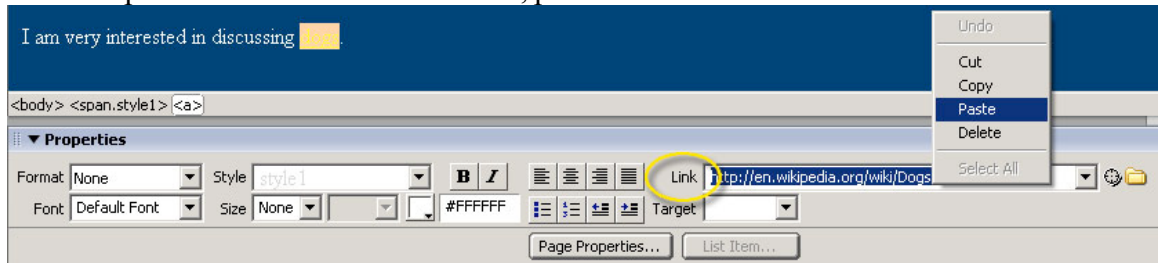

1. First, find the website you desire to create a link to. Select the address with the cursor, right click and copy the web address location to the clipboard.

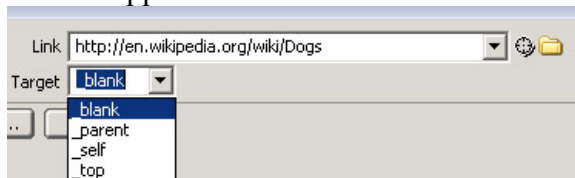

2. Within Dreamweaver, select the word you would like to turn into a hyperlink. Highlight that word with the cursor.

3. In the Properties window of Dreamweaver, paste the web address into the Link field.

4. In the Target field (located beneath the Link field) select “_blank”. This will make the link appear in a new browser window.

5. Finally, test the link by pressing the F12 key. This will open your html document in a browser. Click your new hyperlink and make sure it takes you to where you want to go.
